Free Chlorine/CLO2/O3 Controller
Content

Safe operation procedures

Read the following instructions before using the instrument.
1. After unpacking the instrument please check for damage due to shipping.
2. The instrument must be operated by trained professional and technical personnel.
3. Read the manual carefully to avoid incorrect wiring connection that can cause equipment damage and safe problem.
4. After wiring carefully check all are correct then can power on and make sure the others equipments are correct.
5. Please avoid installing in a high humidity, high temperature, corrosive and in a direct sunlight environment.
6. Please separate the power lines of instrument from other machines that produces high noise in the power lines.

Instrument use

Instruments are used in industrial measuring of the temperature and Free Chlorine, such as wastewater treatment, environmental monitoring, swimming pool, waterworks, food production process, etc.
The instrument can be panel, wall or pipe mounted.
The instrument provides two current outputs. The maximum load is 500 Ohm.
The instrument provides 3 relays. It can pass though a maximum of 5 Amps at 250 VAC or 5 Amps at 30VDC.

Product content

The product package contains 1 instrument, the printed manual, 4 sets of brackets.(fixed block, fixed bar, screw)

Specifications

Functions	FCL	CLO2	O3
Measuring range	0.00 to 20.00 / 0.000 to 2.000 ppm(mg/L)		
Resolution	0.01 / 0.001 ppm(mg/L)		
Accuracy	±0.01 / ±0.001 ppm(mg/L)		
Temp. compensation	Pt-1000/NTC22K		
Temp. range	-10.0 to +130.0℃		
Temp. compensation range	-10.0 to +130.0℃		
Temp. resolution	0.1℃		
Temp. accuracy	±0.2℃		
Solution coefficient	0.0 to 9.99%		
Ambient temperature range	0 to +70℃		
Storage temp.	-20 to +70℃		
Display	Back light, dot matrix		
FCL current output1	Isolated, 4 to 20mA output , max. load 500Ω		
Temp. current output 2	Isolated, 4 to 20mA output , max. load 500Ω		
Current output accuracy	±0.05 mA		
RS485	Modbus RTU protocol		
Baud rate	9600/19200/38400		
Maximum relay contacts capacity	5A/250VAC、5A/30VDC		
Cleaning setting	ON: 1 to 1000 seconds, OFF: 0.1 to 1000.0 hours		
One multi function relay	clean/period alarm/error alarm		
Relay delay	0-120 seconds		
Data logging capacity	500,000		
Language selection	English/traditional Chinese/simplified Chinese		
Waterproof grade	IP65		
Power supply	From 90 to 260 VAC, power consumption < 5 watts		
Installation	panel/wall/pipe installation		
Instrument size	144mm X 144mm X 105mm (H/W/D)		
Cutout size	138mm X 138mm		
Weight	0.85Kg		

Instrument installation

The instrument can be panel, wall or pipe mounted installation.
Panel Installation: Make a 138x138 mm square cutout and insert the instrument. Screw in the fixed block with the screws and fixed bar.

Relay contact protection

Electrical spark at the relay contact may affect the life of the relay, especially in an inductive and capacitive load. In order to inhibit the spark and arc, user should use an RC circuit to extend the life of the relay.
AC protection, use for inductive load
1. load
2. RC eliminate spark, using in 220VAC, R=100 ohm1W,
3. Relay contact
A. DC protection ,A1: inductive load   A2: 1N4007, A3: relay contact
B. AC/DC protection ,B1: capacitive load ,B2: 0.8 Ohm/1W（DC24V）,B3: relay contact
C. Resistive load ,C1:lamp bulb ,C3:relay contact

Display
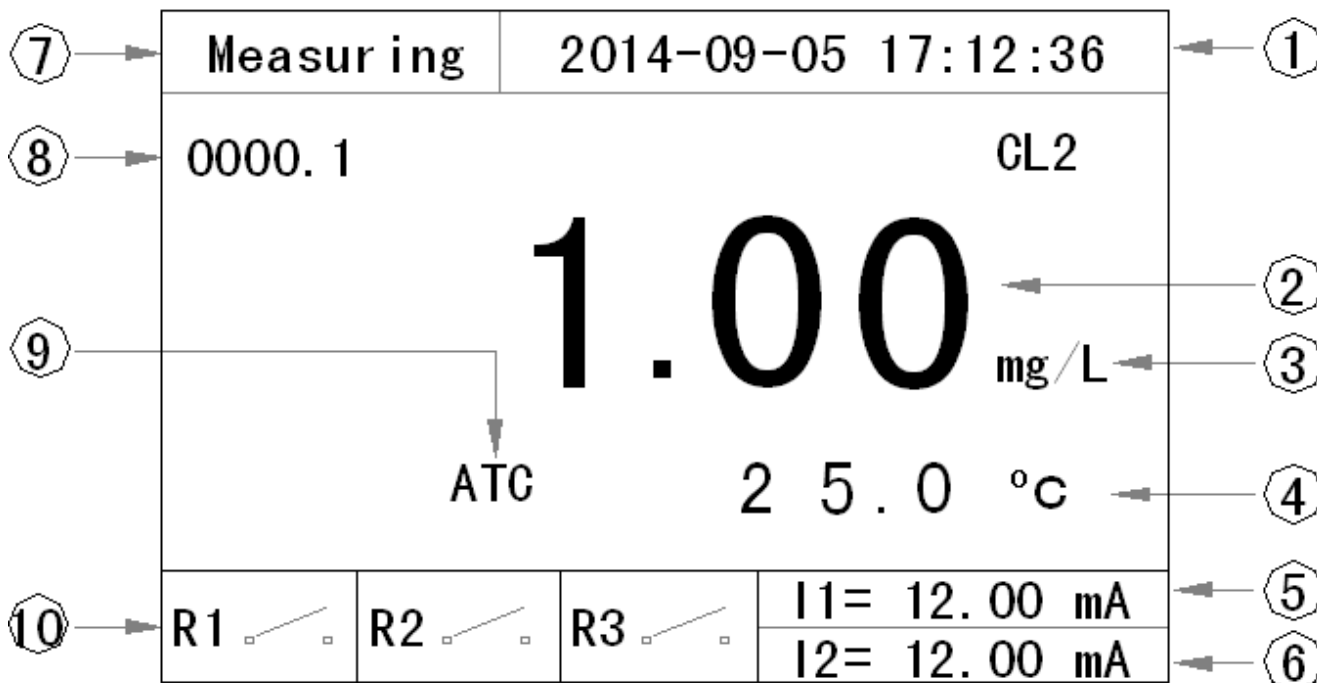

1. Date and time
2. Main display
3. Unit
4. Temperature and unit
5. First current output
6. Second current output
7. Measurement status and Error indicator, there is no display if meter is in keeping mode
8. Count down timer: cycle time/clean time, it also displays the "delay" when relay3 has a delay enabled.
9. Temp. compensation: auto(ATC) or manual(MTC)
10. Relay indicator

Note:
If the FCL readings are under or over the range, it will display 0.00/99.99 or 0.000/9.999
If the temperature readings are under or over the range, it will display -99.9/999.9.

Key
| | MODE | SHIFT | | UP | | DOWN | ENTER |

Key name	Meas. status	Setting status	Cal. status	Record status
MODE	Enter password	Exit	Exit	Exit
SHIFT	none	Move digit	Mode digit	Mode digit
UP	Enter record	Inc	Inc	Inc
DOWN	None	Dec	Dec	Dec
ENTER	ON/OFF back light	Enter	Enter	Enter

Keeping mode

Keeping mode is a safe mode. It is for Calibration, Setting, Record and Clean. In this mode all the relays are open(inactive), current output follows the setting by user(last current or fixed current).

The instrument will enter keeping mode when user presses into Calibration, Setting, Record or the instrument works in clean mode.

It will in keeping mode around 10 seconds when it goes back to measurement mode form the above mentioned 4 mode then left keeping mode.

The instrument will go into the keeping mode when turn on the power.

Current output in keeping mode:
User has two choices: fixed current output or last current output.
        Fixed current: User can set the output current from 4.00 to 20.00mA when instrument goes into keeping mode.
        Last current: User can set the output current keep at the last current when instrument goes into keeping mode.

Relays in keeping mode: Relay1 and Relay2 open.(inactive)

Setting

Press MODE key to enter the password menu and then press UP/DOWN/SHIFT key to input password 1200 then press ENTER will enter to setting mode or press MODE key to exit. If no key is be pressed and over 10 minutes then it will go back to measurement mode.

PASSWORD
0 0 0 0

PASSWORD

Notices:
1. When the input data is not in correct range then it will display ERROR on the top of LCD
2. After input data user needs to press ENTER to save the data.
3. Press MODE to exit.
4. No key is be pressed in 10 minutes then it will go back to measurement mode.

Current 1 settings

```
       CURRENT 1 SETTINGS              CURRENT 1 SETTINGS
   4.00 mA    =  00.00 ppm         4.00 mA    =  00.00 mg/L
   20.00 mA   =  01.00 ppm         20.00 mA   =  01.00 mg/L
   Offset     = +0.00 mA           Offset     = +0.00 mA
   Filter Time =    000 SEC        Filter Time =    000 SEC
   HOLD Type  = ☐ Fixed            HOLD Type  = ☐ Fixed
                 04.00 mA                        04.00 mA
                 ☐ Last                          ☐ Last
```

1. Set the corresponding 4.00mA to ppm/mgL.
2. Set the corresponding 20.00mA to ppm,mg/L, the difference between 4.00mA and 20.00 mA at least 1.00/0.100.
3. Set the offset current, the range is ±1.00mA.
4. The filter time range is 0-120 seconds, the low pass filter of software will active when the current from one point to another point if user sets the filter time.
5. Set the current 1 output mode(fixed / last) when instrument enter into keeping mode.

Current 2 settings

```
       CURRENT 2 SETTINGS
   4.00 mA    = +000.0 ℃
   20.00 mA   = +100.0 ℃
   Offset     =  +0.00 mA
   Filter Time =    000 SEC
   HOLD Type  = ☐ Fixed
                 04.00 mA
                 ☐ Last
```

1. Set the corresponding 4.00mA to temperature.
2. Set the corresponding 20.00mA to temperature, the difference at least between 4.00mA and 20.00 mA is 10.0℃.
3. Set the offset current of temperature, the range is ±1.00mA.
4. The filter time range is 0-120 seconds, the low pass filter of software will active when the current from one point to another point if user sets the filter time.
5. Set the current 2 output mode(fixed / last) when instrument enter into keeping mode.

Relay 1 settings

```
    RELAY 1 SETTINGS              RELAY 1 SETTINGS

 ON/OFF        = ■ ON          ON/OFF        = ■ ON
               = □ OFF                       = □ OFF

 Close S.P.  =  01.00 ppm      Close S.P.  =  01.00 mg/L
 Open  S.P.  =  00.80 ppm      Open  S.P.  =  00.80 mg/L
 Delay Time  =     000 SEC     Delay Time  =     000 SEC
```

1. Press UP/DOWN key to ON/OFF (enable/disable) relay1.
2. Close set point: active point for ppm,mg/L.
3. Open set point: inactive point for ppm,mg/L.
4. Delay time: the range is 0-120 seconds. Relay needs to delay first then active if the measuring data is reach to close set point.

Ex: If user wants turn on the pump at 1.00ppm and turn off it at 0.80ppm, then the close S.P. needs to set to 1.00ppm, Open S.P. sets to 0.80ppm.

Relay 2 settings

```
    RELAY 2 SETTINGS              RELAY 2 SETTINGS

 ON/OFF        = ■ ON          ON/OFF        = ■ ON
               = □ OFF                       = □ OFF

 Close S.P.  =  00.80 ppm      Close S.P.  =  00.80 mg/L
 Open  S.P.  =  01.00 ppm      Open  S.P.  =  01.00 mg/L
 Delay Time  =     000 SEC     Delay Time  =     000 SEC
```

1. Press UP/DOWN key to ON/OFF (enable/disable) relay2.
2. Close set point: active point for ppm,mg/L.
3. Open set point: inactive point for ppm,mg/L.
4. Delay time: the range is 0-120 seconds. Relay needs to delay first then active if the measuring data is reach to close set point.

Ex: If user wants turn on the pump at 0.80ppm and turn off it at 1.00ppm, then the close S.P. needs to set to 0.80ppm, Open S.P. sets to 1.00ppm.

Relay 3 settings

```
       RELAY 3 SETTINGS
 ───────────────────────────────
  ON/OFF        = ■ ON
                = □ OFF
  Period Time   = 0 0 0 1 . 0 HOUR
  Clean Time    =     0 0 1 0 SEC
  Delay Time    =       0 0 0 SEC
  Function      = □ Rinsing
                  □ Interval Alarm
                  □ Error Alarm
```

1. Press UP/DOWN key to ON/OFF (enable/disable) relay3.
2. Period time: The period for Rinsing or interval function.
3. Clean time: When period is timeout then relay active.
4. Delay time: the range is 0-120 seconds. Relay needs to delay first then active if the period is timeout.
5. Function: press UP/DOWN key to choose Rinsing/Interval/Error.

Notice:
1. Rinsing: when period timeout then clean-relay will active, when clean time is timeout the repeat count for the period.
2. Interval alarm: When period timeout then clean-relay active until user resets the interval then the clean-relay inactive and repeat count for the period.
3. Error alarm: The clean-relay active when there is a error produce. No delay time function in this mode.

Measurement settings

```
     MEASUREMENT SETTINGS
 ───────────────────────────────
  Mode         = ■ CL2
                 □ CLO2
                 □ O3
  Unit         = ■ mg/L
                 □ ppm
  Meas. Range  = ■ 20.00
                 □ 2.000
  Offset       =   + 0 . 0 0 mg/L
  Filter       =         0 0
```

```
     MEASUREMENT SETTINGS
 ───────────────────────────────
  Mode         = ■ CL2
                 □ CLO2
                 □ O3
  Unit         = □ mg/L
                 ■ ppm
  Meas. Range  = ■ 20.00
                 □ 2.000
  Offset       =   + 0 . 0 0 ppm
  Filter       =         0 0
```

1. Mode for measuring, press UP/DOWN key to choose.
2. Unit for measuring, press UP/DOWN key to choose.
3. Measuring range, press UP/DOWN key to choose.
4. Offset , range is ± 1.00.
5. Filter: Range 0-10.
Notice:
If the reading is not stable then user can set the filter to average the readings.

Temperature settings

```
      TEMPERATURE SETTINGS

  Automatic     = ■ Auto
                = □ Manual
  Probe         = □ Pt 1000
                = □ NTC 22K
  Offset        =     + 0 . 0  ℃
  Manual Meas.  = + 0 2 7 . 0  ℃
  Manual Cal.   =     2 5 . 0  ℃
```

1. Temperature compensation setting, press UP/DOWN key to choose.
2. Temperature probe, press UP/DOWN key to choose.
3. Temperature offset ,the range is ±5.00℃.
4. Temperature for measuring when user set the temperature to manual.
5. Temperature for calibration mode when user sets the temperature to manual.

```
      TEMPERATURE SETTINGS

  Display       = ■ YES
                = □ NO
```

1. Temperature display: display the temperature on measurement mode or not.

Notice:
1. When user chooses AUTO and doesn't connect temperature probe then the display will not correct.
2. When select the probe needs to make sure the probe type is correct.
3. Manual measurement: the instrument will use this temperature for compensation in measurement mode when user chooses Manual.
4. Manual calibration: the instrument will use this temperature for compensation in calibration mode when user chooses Manual.

RS485 settings

```
        RS485 SETTINGS

  ID Address    = 0 0 1
  Baudrate      = □   9600
                = □ 19200
                = □ 38400
```

1. ID address: 1-255.
2. Baud rate ,press UP/DOWN key to choose.

Date settings

```
        DATE SETTINGS
  Year          =2 0 1 5
  Month         =0 8
  Day           =1 5
  Hour          =1 3
  Minute        =3 6
  Second        =0 4
```

Press UP/DOWN key to set the date. When power off the date will be kept for around 2 days.

Data log settings

```
      DATA LOG SETTINGS
  ON/OFF        =■ ON
                 □ OFF
  Display Type  =□ Record
                 □ XY Chart
  Reset Record  =□ Yes
                =□ No
  Save Period   =0 6 0 SEC
```

1. Press UP/DOWN key to ON/OFF (enable/disable) this function.
2. Display type, press UP/DOWN key to choose
3. Erase all the records.
4. Saving period from 5 to 120 second.

Notice:
1. When user chooses ON, then it will save measuring data follow the save period time.
2. Display type: Record, display the detail of record(5 records in one page), XY chart, display a chart.(150 records in one page)
3. When reset the records, it will spend around 10 seconds.

Output test

```
        OUTPUT TEST
  Current1      =0 4 . 0 0 mA
  Current2      =0 4 . 0 0 mA
  Relay1        =□ CLOSE
                 □ OPEN
  Relay2        =□ CLOSE
                =□ OPEN
  Relay3        =□ CLOSE
                =□ OPEN
```

1. Current 1 output: 4.00-20.00mA, press UP/DOWN to set.
2. Current 2 output: 4.00-20.00mA, press UP/DOWN to set.
3. Relay 1 output, press UP/DOWN to choose.
4. Relay 2 output, press UP/DOWN to choose.
5. Relay 3 output, press UP/DOWN to choose.

Notice: This function for testing the output only.

CALIBRATION

■ Parameters Setting
☐ Zero Calibration
☐ Slope Calibration
☐ Reset Parameters

Press UP/DOWN key to select the functions and then press ENTER key to enter.

1. Parameters setting: set the parameters
2. Zero calibration: calibrate the zero point
3. Slope calibration: calibrate the slope
4. Reset parameters: reset all of the calibrated parameters to default.

Parameters setting

```
     PARAMETERS SETTING

 Solution Coeff. = 2.0 0 %
```

Solution coefficient range is from 0.01 to 9.99%.

Zero calibration

```
     ZERO CALIBRATION

    0 0.1 0 mg/L

    2 5.2 ℃

 Wait stable and press ENTER
```

1. Put the FCL electrode into the flow cell that with zero free chlorine water and the flow is 150L/H.
2. Waiting for the current is stable then press ENTER to finish the calibration.

Notice:
1. The zero point reading needs to less then 0.1 , if the reading is over the range then make sure the FCL electrode is good.
2. If the temperature is over 0.0-60.0℃ then it will display error message on the button of LCD.

Slope calibration

```

└─────────────────────────────────┘
```

This will reset all of the calibrated parameters to default.

Default

CL20	20.00mA	corresponding	1.00	ppm	range: 1.00 to 20.00
CL20	4.00mA	corresponding	0.00	ppm	range: 0.00 to 19.00
					difference : 1.00
CL2	20.00mA	corresponding	0.100	ppm	range: 0.100 to 2.000
CL2	4.00mA	corresponding	0.000	ppm	range: 0.000 to 1.900
					difference : 0.100
Temp.	20.00mA	corresponding	100.0	℃	range: 0.0 to 130
Temp.	4.00mA	corresponding	0.0	℃	range: -10.0 to 120.0
					difference : 10.0
Current 1 output offset			0.00	mA	range: +/- 1.00
Current 2 output offset			0.00	mA	range: +/- 1.00
Current 1 filter			0	second	range: 0 to 120
Current 2 filter			0	second	range: 0 to 120
Current 1 fixed output			4.00	mA	range: 4.00 to 20.00
Current 2 fixed output			4.00	mA	range: 4.00 to 20.00
Current 1 HOLD type			fixed		range: fixed/last
Current 2 HOLD type			fixed		range: fixed/last
Relay 1 CL20	close S.P.		1.00	ppm	range: 0.00 to 20.00
Relay 1 CL20	open S.P.		0.80	ppm	range: 0.00 to 20.00
					difference : 0.01
Relay 1 CL2	close S.P.		0.100	ppm	range: 0.000 to 2.000
Relay 1 CL2	open S.P.		0.080	ppm	range: 0.000 to 2.000
					difference : 0.001
Relay 1 delay time			0	second	range: 0 to 120
Relay 2 CL20	close S.P.		0.80	ppm	range: 0.00 to 20.00
Relay 2 CL20	open S.P.		1.00	ppm	range: 0.00 to 20.00
					difference : 0.01
Relay 2 CL2	close S.P.		0.080	ppm	range: 0.000 to 2.000
Relay 2 CL2	open S.P.		0.100	ppm	range: 0.000 to 2.000
					difference : 0.001
Relay 2 delay time			0	second	range: 0 to 120
Relay 3 period time			1.0	hour	range: 0 to 1000.0
Relay 3 clean time			10	second	range: 0 to 1000
Relay 3 delay time			0		range: 0 to 120
Relay 3 function			error alarm		range: clean/period alarm/ error alarm
Save time			60	second	range: 5 to 120
ID address			1		range: 1 to 255
Baudrate			9600		range: 9600,19200,38400
CL20 offset			0.00	ppm	range: +/-1.00

CL2 offset	0.000 ppm	range: +/-0.100
Unit	mg/L	range: mg/L,ppm
Mode	CL2	range: CL2/CLO2/O3
Temp. Offset	0.0 ℃	range: +/- 5.0
Manual Temp. for measurement	25.0 ℃	range: -10.0 to 130.0
Manual Temp. for calibration	25.0 ℃	range: 0.0 to 60.0
Language	English	range: English/tranditional Chinese /simple Chinese
Filter	5	range: 0 to 10
Temp. compensation	MTC	range: ATC/MTC
Temp. probe	Pt1000	range: Pt1000, NTC22K
Record type	record	range: record/XY chart
Solution temperature coefficient	2 %	range: 0.01 to 9.99

Password

Press MODE key
1100:Calibration mode
1200:Setting mode
If no key is be pressed and over 10 minutes then it will go back to measurement mode.

Error code

Error 01	memory error
Error 02	reading is over maximum
Error 03	reading is under minimum
Error 04	temperature is over maximum
Error 05	temperature is under minimum
Error 06	current 1 output is over 20.5 mA,the maximum is 22.00mA
Error 07	current 1 output is under 3.8 mA, the minimum is 3.5mA
Error 08	current 2 output is over 20.5 mA,the maximum is 22.00mA
Error 09	current 2 output is under 3.8 mA, the minimum is 3.5mA
Error 10	record error
Error 11	ADC damage
Error 99	default parameters lost

RS485 command

The instrument use the standard Modbus-RTU protocol, all of the data are word type(2 bytes), the range is -32767～32767 ,16 system.

PC command:

	ID address	command	Start address	Data number	CRC16
length	1 byte	1byte	2 byte	2 byte	2 byte
Ex.	0x01	0x03	0x0001	0x0001	0xD5CA

Instrument response:

	ID address	command	Data number	data	CRC16
length	1 byte	1 byte	1byte	N byte	2 byte
Ex.	0x01	0x03	0x02	0x02 0xBC	0xB895

If response is 01,the command is wrong.
If response is 02,the address is not correct.
If response is 03,data number is not correct.

command 03: read the settings
command 04: read the readings

04:definition
address
(00)   0x00   CL20/CL2 reading   reading:X 0.01，X0.001
(01)   0x01   CL20/Cl2 current   reading:X 0.01
(02)   0x02   Temperature   reading:X 0.1
